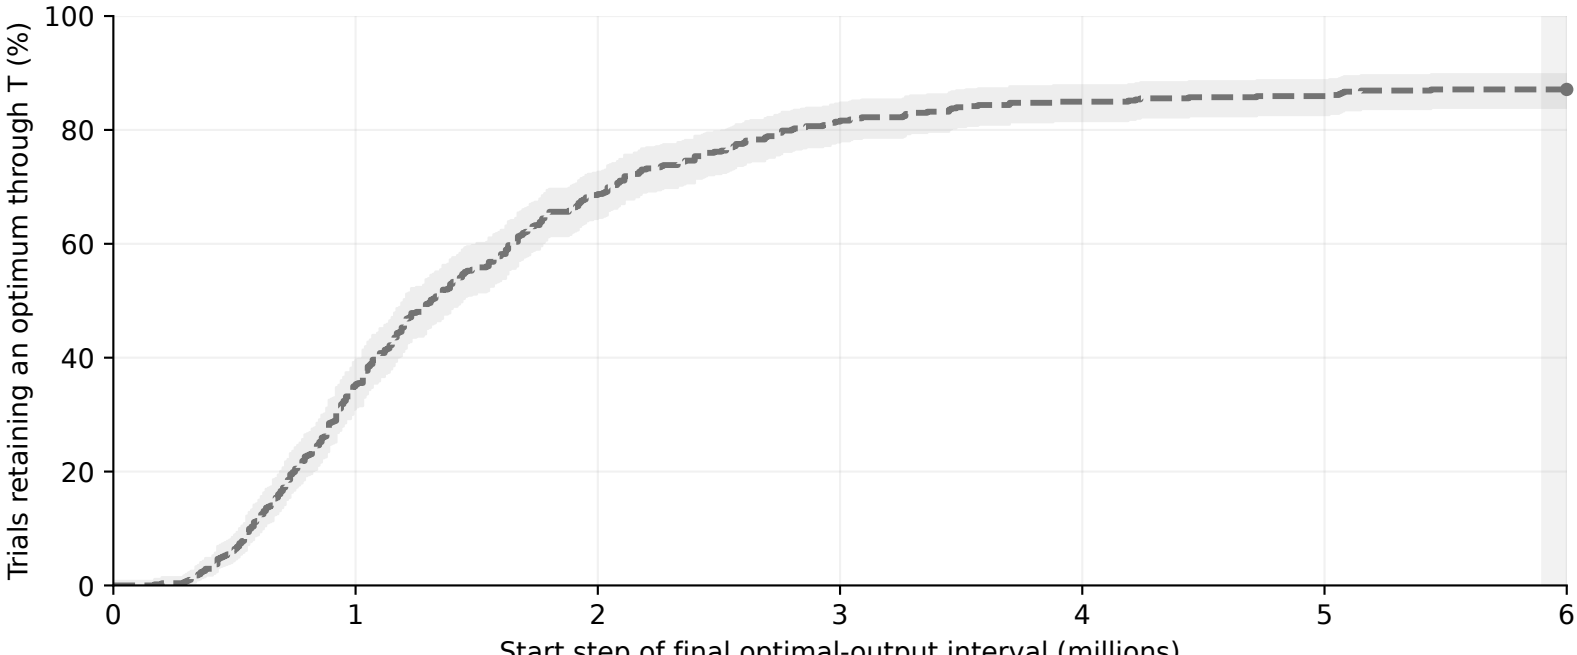
Instance 2 | Historical circuit at 6 million steps

512 trials per case | T = 6.0 million CA steps | Minimum persistence: 100,000 steps



Legacy N=1* 446/512 (87.11%)

Retrospective: only intervals persisting through T count; the same unit and vector must persist.
Bands: pointwise 95% Wilson intervals. Persistence is inferred from FSM output events.
*Legacy reset gains differ from initial Weights; this is not an N-only comparison.
